

HOUTTUIN 211 SERIES PUMPS

SELF-PRIMING VERTICAL SCREW PUMP FOR NON LUBRICATING LIQUIDS

PRODUCT PERFORMANCE YOU CAN RELY ON

The Houttuin double entry twin screw pumps series 211 are vertical rotating self priming positive displacement pumps. Two intermeshing screws rotating in a pump casing insert ensure high pumping efficiency with constant axial flow and unequaled suction power.

- Rugged design for the harshest environments
- Field replaceable liner and 'pop-out' rotor access for ease of inspection and maintenance
- Vertical design with space-saving bracket for motor mounting

211 SERIES VERTICAL SCREW PUMP

Up to 300 m³/hr, 16 barg and viscosities from 0.6 cSt

PRODUCT SPECIFICATIONS AND FEATURES

Casing and Covers	Ductile iron, cast iron, carbon or stainless steel (type 300 or 400)
Rotors	Carbon or stainless steel (type 300 or 400) (with optional hardening and plating)
Liner	Ductile iron, cast iron, ni-resist, bronze (with optional hardening and plating)
O-rings	Buna N, viton steel or teflon (in contact with pumped fluid), nitrile (in contact with lubricating oil)
Shaft Sealing	Stuffing boxes, lip seals, single or double mechanical seals Single seal-product lubricated, or one seal per shaft end
Timing Gears	Spur or double helical
Bearings	Roller - internal or external
Flow rate range	Up to 300 m ³ /hr (2,000 gpm)
Outlet pressure	Up to 16 barg (232 psig)
Inlet pressure	Up to 10 barg (145 psig)
Viscosity	0.6 - 1,500 cSt
Temperature	-5° C to 100° C (-20° f - 284° F)
Speed	Up to 2900 rpms
Drive	Direct, suitable for variable speed operations
Rotation	Clockwise facing pump driveshaft
Mounting	Horizontal
Port Connections	Per ANSI 150#, 300#, 600# or DIN PN16, PN24 – locations: top, bottom, right, left
Accessories	Pressure relief valve, temperature and vibration monitors

PERFORMANCE GRAPHS

HOUTTUIN 211 DIAGRAM

Optional motor bracket for mounting vertical motor. Coupling enclosed within.

Safe transmission of torque through the hardened and ground oil lubricated timing gears

Optimally sized oil lubricated and maintenance free ball bearings, also serve to locate the rotors axially.

Safe shaft sealing by single unbalanced and product lubricated mechanical seals.

An optional direct mounted pressure relief valve is available for over load protection.

Axial forces balanced through double entry spindles

Interchangeable casing insert to accommodate multiple material options

Lengthen service intervals with ultra-rigid, 1-piece rotors that limit deflection and eliminate common, assembled rotor failure modes

The special profile of the spindle flanks results in continuously and nearly pulsation-free pumping, high efficiency, good NPSH-values and constant pressure course.

In standard design the pump is fitted with single unbalanced mechanical seals. We offer multiple seal options such as flushing and quenching.

DIMENSIONS

Sense of rotation: clockwise seen from drive side
